Special cleaning foam for pre-treatment of every marten repellent

This pre-cleaner should be used before any marten protection measures. The special cleaning foam removes the marten's scent mark and thus no longer irritates the marten's defense instinct. The MARDERfix pre-cleaner is not an engine cleaner in the conventional sense, but is mainly used to remove the marten scent mark. It is therefore not a marten repellent measure, but the necessary preliminary work to optimize the effect of the subsequent protective measures.

The pre-cleaner can be used on any surface such as glass, rubber, plastic or car paintwork and is harmless to electronic components.

Application

01 Pre-treatment with pre-cleaner

Shake well before use. One spray can is sufficient for one vehicle.

02 Spray thoroughly

Spray the cooled engine compartment and the inside of the hood thoroughly and all over.

03 Rinse with water

After a short exposure time, rinse off the foam thoroughly (e.g. with a watering can).

Note

If there are visible signs of martens in the parking lot, it is advisable to apply the pre-cleaner selectively there as well. Do not use a sharp jet of water, high-pressure cleaner or similar to rinse off the cleaning foam! Always read the label and product information before use.
