Scent marten repellent for the engine compartment

Martens are known for their penchant for nibbling on cables and hoses in the engine compartment of vehicles, often causing expensive damage. With the MARDERfix scent star – Art. No. 06510 – this problem is a thing of the past. The specially developed scent reliably deters martens without harming the animals. Once placed in the engine compartment, the scent star provides protection for up to 6 months and ensures that your vehicle remains safe and marten-free.

In addition, the MARDERfix scent star also protects against other rodents that could settle in your engine compartment. Rely on the effective and animal-friendly solution to protect your car in the long term.

Application

Before using any marten repellent measure, the marten's scent mark must be removed. MARDERfix pre-cleaner is recommended for this purpose.

01 Pre-treatment with pre-cleaner

Spray the cooled engine compartment and wheel arches generously with the foam from the marten repellent spray (point of attack for other martens).

02 Rinse with water

After a short exposure time, rinse off the foam thoroughly – for example with a watering can. The vehicle is therefore neutral.

03 Application fragrance star

Open the packaging of the fragrance star. Remove the perforated foil bag from the packaging and secure it in the engine compartment (e.g. with the enclosed cable tie).

Note

Do not spray inside the car! Spray distance approx. 20 cm.

Use biocides safely. Always read the label and product information before use.
