Protective conduit for cables and hoses

The bite-resistant special plastic hose can be attached without removing cables or hoses. Suitable for ignition cables, wires and thin hoses.

Application

Before using any marten repellent measure, the marten's scent mark must be removed. MARDERfix pre-cleaner is recommended for this purpose. Cut the slotted protective hose to the required length and pull it over the part to be protected.

01 Pre-treatment with pre-cleaner

Spray the cooled engine compartment and wheel arches generously with the foam from the marten pre-cleaner (point of attack for other martens). After a short exposure time, rinse off the foam thoroughly – for example with a watering can. The vehicle is therefore neutral.

02 Installing the protective hose

Cut the protective hose to the appropriate length. Cut the slotted protective hose to the required length and pull it over the part to be protected.

Note

Do not install near hot parts. Always read the label and product information before use.
